

Introduction to IT Bridge Course

Mid Term Examination Solutions (E1PA105B)

Section A: Productivity Tools & Hardware

1. Define a spreadsheet and explain its uses in data management.

A spreadsheet is a digital application (like Microsoft Excel) that organizes data into a grid of rows and columns. It is used in data management for performing complex calculations using formulas, creating visual data representations through charts, and organizing large datasets for efficient sorting and filtering. [cite: 221]

2. List and give examples of any two types of storage devices.

Two types of storage devices include:

- **Primary Storage:** Random Access Memory (RAM).
- **Secondary Storage:** Hard Disk Drives (HDD) or Solid State Drives (SSD). [cite: 223]

5. Creating an automatic table of contents in Microsoft Word.

To create an automatic table of contents, users must apply Heading Styles (Heading 1, Heading 2, etc.) to the document titles. Once applied, navigate to the 'References' tab and select 'Table of Contents' to automatically generate a list based on the styled text. [cite: 230]

Section B: Operating Systems & Memory

4. Describe the life cycle of a process in an operating system.

The process life cycle typically includes several states: **New** (process being created), **Ready** (waiting for the processor), **Running** (instructions being executed), **Waiting** (waiting for an event like I/O), and **Terminated** (finished execution). [cite: 228]

6. Explain how paging works in memory management.

Paging is a memory management scheme that eliminates the need for contiguous allocation of physical memory. This scheme permits the physical address space of a process to be non-contiguous by dividing physical memory into fixed-size blocks called frames and logical memory into blocks of the same size called pages. [cite: 233]

Section C: Comparisons & Evaluations

7. Compare Microsoft Word and Microsoft PowerPoint.

Feature	Microsoft Word	Microsoft PowerPoint
Primary Purpose	Word processing and document creation.	Visual presentations and slideshows.
Core Unit	Pages.	Slides.
Key Features	Grammar checks, headers/ footers, indexing.	Animations, transitions, speaker notes.

[cite: 236]
